Dr. H. Mc Allister
Council for Tobacco Research

October 31, 1992

Dear Dr. Mc Allister:

I am a Research Associate in the Department of Plant Pathology, U.C., Berkeley.

Among my research avenues, I have been investigating the effects of possible anti-cancergenic chemicals on plant neoplasms, finding that such chemicals can inhibit neoplastic growth while inducing differentiation. I am writing to inquire whether your Council would consider supporting such research.

My associate, Professor N. Panopoulos, is quite willing to sponser me for any grant.

Many thanks for your attention.

Sincerely,

Michael Lieber
